

BIOL-6 Human Anatomy

Course Information

- Semester & Year: Fall 2025
- Course ID and Section number: BIOL-6-V9342
- Instructor's name: Wendy Riggs
- NO required synchronous meetings
- NO proctored exams
- Course units: 4

Instructor Contact Information

- Office location or Online: SC216C
- Office hours: By appointment
- Phone number: 707-476-4227
- Email address: wendyk-riggs@redwoods.edu
- Other method (Pronto, Canvas In-box, social media): Always contact me through Pronto!

Catalog Description

An introduction to human anatomy. The course includes the study of the gross and microscopic structure of all organ systems of the human body with emphasis on the relationship between structure and function. Laboratory work includes microscopy, dissection, and the study of human cadavers.

Course Student Learning Outcomes

- Describe key structural features of different human cell and major tissue types.
- Identify and describe the anatomy of the systems of the human body.
- Relate structure and function at the cellular through system levels of organization of human body systems.
- Describe structural or anatomical changes that occur in disease, injury or aging of the human body systems.

Prerequisites/corequisites/ recommended preparation

Pre- or co-reqs BIOL-1 (or 3)

Educational Accessibility and Support

College of the Redwoods is committed to providing reasonable accommodations for qualified students who could benefit from additional educational support and services. You may qualify if you have a

physical, mental, sensory, or intellectual condition which causes you to struggle academically, including but not limited to:

- Mental health conditions such as depression, anxiety, PTSD, or bipolar disorder
- Common ailments such as arthritis, asthma, diabetes, autoimmune disorders, and diseases
- Temporary impairments such as a broken bone, recovery from significant surgery, or a pregnancy-related disability
- Neurodevelopmental disorders such as a learning disability, intellectual disability, autism, acquired brain injury, or ADHD
- Vision, hearing, or mobility conditions

Available services include extended test time, quiet testing environments, academic assistance and tutoring through the [LIGHT Center](#), counseling and advising, alternate formats of course materials (e.g., audio books, braille, E-texts), assistive technology, learning disability assessments, approval for personal attendants, interpreters, priority registration, on-campus transportation, adaptive physical education and living skills courses, and more. If you believe you might benefit from disability- or health-related services and accommodations, please contact [Student Accessibility Support Services \(SASS\)](#). If you are unsure whether you qualify, please contact Student Accessibility Support Services (SASS) for a consultation: sass@redwoods.edu.

SASS office locations and phone numbers

Eureka campus

- Phone: 707-476-4280
- Location: Learning Resource Center (Library)

Del Norte campus

- Phone: 707-465-2353
- Location: main building, near the Library

Klamath-Trinity campus

- Phone: 707-476-4280

Biology 6 – Human Anatomy

Fall 2025 (BIOL-6-V9342)

[F25 Tentative Schedule](#)

Instructor Information

Instructor: Wendy Riggs

Email: wendyk-riggs@redwoods.edu

Chat: Pronto!

Office: SC 216C (Eureka)

Office Hours: Th 12pm-1pm in Zoom

Office phone: 707-476-4227

Zoom study sessions (optional): TBD

Catalog Description

An introduction to human anatomy. The course includes the study of the gross and microscopic structure of all organ systems of the human body with emphasis on the relationship between structure and function. Laboratory work includes microscopy, dissection, and the study of human cadavers.

Course Student Learning Outcomes

1. Describe key structural features of different human cell and major tissue types.
2. Identify and describe the anatomy of the systems of the human body.
3. Relate structure and function at the cellular through system levels of organization of human body systems.
4. Describe structural or anatomical changes that occur in disease, injury or aging of the human body systems.

Course schedule

You can access the [Fall 25 tentative course schedule](#) here. All the weekly content will be nicely organized for you in the Canvas modules. **There are no required synchronous meetings in this online class.** However, we will meet up for study sessions in Zoom. We'll determine the best times for these study sessions based on folks' schedules. *All study sessions will be recorded if you can't make it and will be posted in each relevant exam module.*

Diversity, Equity, Inclusion and Accessibility

As you embark on the challenging adventure of learning human anatomy, you can be assured we will work to co-create an inclusive, supportive, and rigorous learning community. One of the greatest benefits of education is learning from your classmates and instructors. The diversity of our experiences, backgrounds, and perspectives enriches our collective understanding and enhances our ability to think critically and creatively. We celebrate the uniqueness of every individual and encourage open-mindedness, respect, and empathy. By fostering an environment where all voices are heard and valued, we aim to build a space where everyone can thrive, contribute, and succeed.

Biology 6 – Human Anatomy

Fall 2025 (BIOL-6-V9342)

[F25 Tentative Schedule](#)

Course materials

We don't have much flexibility around the required materials list for our course this semester. Let me know if you have any questions about this.

Required textbook (with online subscription to Connect)

Human Anatomy by McKinley, O'Loughlin, and Pennefather-O'Brien, 6th ed. with McGraw Hill Connect for about \$150.

This is an excellent anatomy text, and we will be using its accompanying supplementary materials for labs and other assignments. This is a must-do purchase. Please access it inside Canvas.

Required lab kit

[BIOL-6 lab kit from Carolina Biological](#) for \$85 (plus shipping).

This lab kit includes all the materials you'll need to complete four dissections (eyeballs, hearts, brains, and kidneys). It also includes digital labs that we may be taking advantage of. **You must complete the 4 dissection labs in this kit to pass the class.**

Required lab software

Visible Body subscription for \$60 (1 year access).

Visible Body will be our lab source for three-dimensional models. You will have a free 2 week trial before you have to pay for this. All Visible Body assignments can be accessed directly inside Canvas, which is super handy. You will be prompted to pay for your subscription once you start doing lab activities. Please wait until you access the first lab to make this purchase.

Also, VisibleBody must be accessed from a computer. It won't work on your phone, or tablet.

Recommended materials

[Human Anatomy Interactive Atlas offered by Anatomylab.com](#) (at least 4 months for \$9.99). This is a really cool atlas to support your lab learning, and has amazing interactive images for studying both cadavers and histology. I will be pulling images from this resource for quizzes and exams.

A Visual Analogy Guide to Human Anatomy & Physiology by Paul Krieger for \$65. If you're interested in a good coloring book, this one is nice for both A&P. It has helpful and creative mnemonics and study strategies.

Helpful technology

In our online class, we'll need technology to effectively engage with each other. Check out this list of helpful tech, and let me know if you think there will be an issue with anything.

- Reliable and updated computer (preferable, but let me know if you have issues with this). Be careful about assuming you can do all your coursework on your phone. There are a lot of moving parts in

this course, and sometimes our phones don't do the best job facilitating online learning, especially in a highly visual and three-dimensional course like Human Anatomy.

- If you do plan to access your course on your phone, I highly recommend using the Canvas student app.
- Most computers and internet providers are adequate for course success, though speedy internet access makes video conferencing easier (for example, in Zoom and Pronto).
- I really encourage video communication in our online class. A working webcam or cell phone that can take video helps with this.
- You will take a lot of screenshots of lab activities in this class. Be sure you have the tools you need to do this. (The tools vary, depending on the device you are using.)
- You will also need to take pictures (selfies) that include your face for lab work. Please be prepared to make this happen.

Other items you might find helpful

To learn anatomy, it is really helpful to engage with the material in as many ways as possible. You'll find some of the following items helpful when taking notes or studying for exams:

- Colored pencils or pens for note taking. Folks get serious about this, especially since I am an instructor who looooooves color. Being able to match the colors I use might be helpful for your learning.
- Sticky notes (many colors) and/or 3x5" index cards (any color) for studying.
- Three ring binder or spiral notebook for your External Brain.

Biology 6 – Human Anatomy

Fall 2025 (BIOL-6-V9342)

[F25 Tentative Schedule](#)

Canvas

All content is available to you and organized in Canvas, the official learning management system (LMS) of College of the Redwoods. I recommend accessing all course materials from the modules. This will ensure you see all support materials and you can see the assignments within the appropriate overall course context.

Log into Canvas

You can access Canvas from the [single sign on link](#) at the CR website.

You can **get Canvas help** directly from the folks at Canvas by visiting [Canvas Help for Students](#). Just click on "contact support" in the top right corner to chat with a Canvas support human.

You can also **get help from CR** at the [Student Tech Help](#) website. You can email its@redwoods.edu, or call 707-476-4160.

You can **get additional help** with online learning at <https://www.redwoods.edu/online>.

Because this is an online class, **you should plan on logging into Canvas ALMOST EVERY DAY**. Please also make sure you watch the video announcements I post. One of the most valuable resources is access to your classmates and instructor. We're all in this thing together, and Canvas is our classroom.

All content is organized in weekly MODULES. Each module has the same structure and is set up by DUE DATE. I will try to be organized and consistent, but if there is content you are looking for but can't find, PLEASE contact me ASAP. There are probably other folks looking for the same thing.

Extra help with Canvas and tech

If you want extra help with Canvas or computers, we also have a couple of really nice (and free!) non-credit courses you can take. Look for these on [WebAdvisor](#). They won't add to your unit load, and can help provide "just in time" tech support when you need it.

- **EDUC-203: Getting Started in Online Classes with Canvas**

A course preparing students to be effective learners in an online environment. This course will emphasize best practices in online learning, internet etiquette, and the effective use of the Learning Management System. It is intended for students taking an online course for the first time or for those in need of an online refresher. This course also serves as a great introduction to other software used in the workplace.

- **EDUC-207: Getting Started in Online Classes with Computers**

A course in basic computer skills development designed for students who have little or no experience using a computer. Topics include fundamental components of computer and program operation such as an introduction to internet usage, MyCR, email, and file system management and navigation.

FYI: Designating pronouns in Canvas

You can designate pronouns to follow your name in Canvas. If you're interested in learning more about why you might do this, here's a helpful resource describing [why pronouns matter](#). Reflecting on the power of inclusive and gender-neutral language is important for all of us, but it is especially important for those of us going into future careers that involve helping humans, such as healthcare. It is easy to designate your pronouns in Canvas:

1. Log into Canvas.
2. Click on Account (top left menu bar thing).
3. Choose Settings from the options that appear.
4. Click on Edit Settings (to the right).
5. One of the new options in the Settings is a pronoun option dropdown.

Biology 6 – Human Anatomy

Fall 2025 (BIOL-6-V9342)

[F25 Tentative Schedule](#)

Course activities (assignments)

The following activities are set up to help you learn the course content and become more comfortable talking (and thinking) about the human body. Your grade in the class is heavily weighted on exams. The other activities are designed to help you learn the content you'll need for the exams.

Lectures (≈ 5% of total grade)

Scoring: Credit for completion

Course content is delivered through video lectures found in discussion forums. (If the video lectures are difficult for you, you can also acquire course content by reading the textbook.) To complete these lecture assignments, you have two tasks.

First: Watch the lecture and take notes

Watch the video lecture and take notes in your External Brain. (You can also find the lectures on YouTube, but I encourage you to watch them in Canvas, because then you don't have to watch ads.) Treat the video just like an in-person lecture. Your ability to take good notes is critical for your success in this course (and likely in following courses).

Next: Participate (meaningfully) in the discussion

The goal here is to engage with the course content *and your classmates* in a way that is meaningful for your learning. There are no required post numbers or word counts. The only requirement is meaningful participation. Some ways you might participate are:

- **Share something muddy or fun.** This can include something you were confused about from the lecture, or something you thought was particularly cool.
- **Post extra-value resources** like videos with explanations, images or links with descriptions, practice exam questions, vocabulary lists, or excerpts from your External Brain.
- **Share metacognitive insights** describing your thinking about the content and how your understanding may have changed (or deepened) as you engaged with the process.
- **Make authentic connections with classmates** and help build our learning community. If you find something helpful, say so. That will help guide the quality of the forum.
- **Ask questions** about the things that confused you.

I highly encourage you to visit and participate in the discussion a couple times. Because we're running an asynchronous class, the discussion forum will change over time. Come back and see what else you can learn.

Want Riggs's input?

You can now "tag" people in the Canvas discussion forums. If you and your discussion groupmates can't come to an agreement about something, feel free to tag me in a post by using the @ sign. This is a cool way to get my attention, so I can hop into your forum and provide some perspective. Please use this only after deciding you can't figure it out yourselves.

Quizzes (≈ 5% of total grade)

Scoring: Credit for correctness

Administered through Canvas, these short quizzes (one per lecture and lab) will cover the week's material. You can take them as many times as you want and Canvas will record your high score. Quizzes mimic the format of the exams in this class. Each quiz will cover one lecture and one lab, so you can practice that topic as much as you want. Most quizzes are 10 questions long, timed (about 1 min/question), and they pull from a bank of questions, so each time you take the quiz, you'll get a different set of questions on the topic. You are not shown the correct answer on the quizzes, but I encourage you to discuss them with your classmates, especially if you find something tricky. You are welcome to continue taking quizzes as many times as you want for practice, even after the "best by" date.

Labs (≈ 5% of total grade)

Scoring: Credit for completion

Labs are a required part of this course. If you do not earn 70% of the lab points, you cannot pass the class. You must also complete all four dissections.

Each week, there will be two lab assignments to complete (one associated with each lecture topic). There are four main activities for labs, and the goal in ALL of them is the same: **Learn the required structures.** Each lab assignment includes the list of required structures and your task is to identify the structures using various "specimens" presented in the assignment. Each of the four types of activities are described in a separate tab in the lab assignment. Each lab will have a different combination of these types of assignments.

- **Connect** assignments are generated by our textbook company (and this is why the textbook, with Connect access, is required for the class). You will use these assignments to deepen your understanding of the required structures. Usually you will be identifying structures using images of human cadaver donors or other models. The images are not three-dimensional, and cannot be rotated. All Connect assignments are "due" on the last day of class, but I do this so you can continue learning and practicing all semester. The actual Connect "best by" dates are the same as the lab assignment. Connect assignments are automatically graded. You don't need to submit anything in Canvas.
- **Histology** assignments are Riggs-generated assignments that ask you to explore various microscope slides to learn the required structures. The "histo" tab always has links to resources that will help you interpret each slide. For credit on the histo, please upload one document that includes evidence of your learning.
- **Visible Body** assignments give you access to three dimensional models that you can explore to discover required structures. These assignments are especially useful for exploring relationships between structures, and gaining a more complete view of how to identify things. All VB assignments are "due" on the last day of class, but I do this so you can continue learning and practicing all semester. The actual VB "best by" dates are the same as the lab assignment. VB assignments are automatically graded. You don't need to submit anything in Canvas.
- **Carolina dissections** are tasks related to your lab kit. There are four dissections you'll do throughout the semester. **ALL four dissections are required to pass the class.** You will upload pictures of your dissections, including selfies. You are welcome to have a lab partner (or two) and share one lab kit amongst you. For credit on the dissection, please upload one document that includes evidence of your learning.

I recommend taking screenshots of the slides and models, and then labeling the required structures for your EB. You can also print your work, and submit pictures of your printed work. *Note: Remember,*

you don't need to document your Connect or Visible Body work, since they are automatically submitted to Canvas when you finish them. However, you might want to take pictures for your EB.

Labs will be graded on completeness, which means the actual thing you turn in is less important than the learning you do. Please trust that the assignments will help you be successful on the exams, so are worth your time. But YOU get to decide how you engage with them, and how you document your work. Lab assignments are “best by” Tuesdays and Thursdays at 11:59pm. I highly encourage doing the lab work in groups. And please know-- each lab is designed to take about 3 hours to complete. If they are taking you much longer, let's talk. And if they are taking you much less, you would be very wise to spend the rest of the time studying the required structures!

Check-ins (≈ 5% of total grade)

Scoring: Credit for completion

Four times over the semester, you will have the chance to do some sort of check-in with me. This is just an easy way for us to stay connected, which is a really important ingredient that helps me support your success in this class. There are 3 ways to complete your check-in assignments:

- Record a simple (and very BRIEF- 2 minutes or less) video in Canvas. I love this option because I get to see YOUR face and hear your voice, and I feel like I know you better after that. It doesn't facilitate very good back-and-forth conversations, though.
- Connect with me in Pronto, our super amazing (and easy) chat tool. I love this option because it is really easy to spend some time chatting. We can even do an impromptu video chat in Pronto.
- Schedule a phone call or Zoom video chat, so we can have a more in-depth discussion.

External Brain (≈ 5% of total grade)

Scoring: Credit for completion

Over the course of the semester, you will create your own unique resource referred to as your “External Brain (EB).” This is basically just a compilation of any notes you take while learning. You want your External Brain to be in a format that is optimally useful and accessible to YOU. **You will be able to use your External Brain on all exams.**

Your External Brain should contain your original work, although of course you are welcome to share ideas and discuss concepts with your classmates. Your External Brain will be assessed for completion (not accuracy). You have an interest in accuracy, though, because you can use your EB on your exams.

External Brain Rules

1. All content in your EB must be your own work.
2. You may include UNLABELED images in your External Brain, even if you do not draw them yourself. (You can white-out the labels on the images if you want.) You are welcome to LABEL any images by hand. It is wise to cite the image source if you do this.
3. Please do NOT include MY typed lecture notes or text chapters in your External Brain. However, you CAN include all your own stuff (and you are welcome to copy any material into your EB. Again, it is wise to cite the source.)
4. In anatomy it is **NOT ok to include lab handouts in your EB**. Refer to the EB assignments in Canvas for a list of other course materials you can include if you want.

Exams (≈ 75% of total grade)

Scoring: Credit for correctness

Your future likely has exams in it. In a high-content biology course like this one, it therefore makes sense to practice taking exams. Please try to approach these exams as opportunities to improve your skills.

Midterm Exams (4)

There will be four midterm exams throughout the semester that cover material from both lecture and lab. There will also be an optional comprehensive final exam that can replace any lower midterm scores. Anatomy exams are divided into two different types to facilitate ease of grading.

You have two attempts at each exam, and Canvas will record your high score. All questions are pulled from question banks, so each attempt will present a unique set of questions.

You may use your External Brain on all exams. I do this because I don't need you to memorize every little detail, though I do need you to be familiar enough with the material to be able to look it up and find it in your notes. Because the exams are also timed, you will still want to study and prepare for them. Before each exam, you will also agree to this honor code:

Honor Code for Exams in Riggs Classes

- I promise that the work I do on this exam is my own.
- I am allowed to use the resources I've created and collected in my External Brain.
- I will NOT consult with any other humans when completing this exam.
- I will NOT use the internet to search for information or answers.
- I will NOT use my textbook to search for information or answers.
- I will NOT consult any AI tool for help.

This honor code is designed to ensure the integrity of the exam process, which is an important part of helping support your deep learning and skill building in this class. Please let me know if you have questions or concerns about this.

Final Exam (Optional)

You will have the option of taking a comprehensive final exam. This exam will not count toward your grade directly, but if you take it, you can use it to replace any (and ALL!) lower midterm scores. If your final exam grade is lower than your midterm grades, it will not impact your final grade at all. You don't have to decide about this until finals week. (Note: Replacing your lower midterms is a manual process, so it will not happen automatically in Canvas.)

Assigning grades

The purpose of grading is to somehow quantify how well you are mastering the material in this course. Grades can help you pinpoint troublesome topics that might impact your understanding of future content (in this course or even in future programs). And your "grade" in this class matters, because it can determine whether or not you get into the programs you are aiming for. However, grades can be tricky and I've spent a lot of time reflecting on this.

I've moved toward **weird grading**. It probably won't feel that new at first, but we will focus on learning and improvements...and not the number that represents any kind of judgment of you.

I know this is vague, and the only thing I can assure you of with absolute confidence is that this move is GOOD FOR YOU and it is GOOD FOR YOUR LEARNING.

With the caveat that we'll be doing things a little differently this semester, in the end I must submit a final grade for each of you. I am including the approximate % scale I've used in the past to determine letter grades in my classes.

100.0 – 93.00% = A	89.99 – 87.00% = B+	79.99 – 77.00% = C+	69.99 – 60.00% = D
92.99 – 90.00% = A-	86.99 – 83.00% = B	76.99 – 70.00% = C	< 59.99% = F
	82.99 – 80.00% = B-		

Canvas will report a grade for you. This is the lowest grade you can earn in the class. At the end of the semester, I will look at all the scores in our class and may adjust these ranges a little.

Biology 6 – Human Anatomy

Fall 2025 (BIOL-6-V9342)

[F25 Tentative Schedule](#)

A typical week

Human Anatomy is one of the most important courses you'll take to prepare you for a future career in health or kinesiology. At the same time, online learning can be challenging, especially if (for many reasons) you'd rather be in a face-to-face classroom. I want to assure you that I will provide you with ample opportunities to authentically engage with the content to ensure deep and meaningful learning. Please take a look at our [F25 Tentative Schedule](#) for the SEMESTER-LONG PLAN. But to help you visualize how this translates to your workload, check out this example of a typical week in this class:

MONDAY

Watch the first video lecture of the week and take notes in your External Brain. If there are things you don't understand, consult the textbook for clarification. There are no "due dates" associated with this task. It is individual and independent and the External Brain you build can be used on your exams. This whole thing should take you 1-2 hours and is similar to experiencing a face-to-face "lecture."

After watching the lecture, share some thoughts in the discussion forum. What is muddy? What was cool? For credit, post something meaningful.

TUESDAY

Complete the first lab of the week. I encourage you to work together (because it is easier that way). Labs are where you get hands-on experience learning about the required structures for this class. You will have various tasks to complete for each lab. You will want to collect screenshots of your work to submit as evidence. Labs are supposed to take you 3 hours to complete. If you're taking less than this, you should probably spend some more time studying. If you're taking more, then please be sure you are using your time efficiently and your efforts are furthering your learning.

It is a good idea to also check back in with the lecture discussion. See if there are questions you can answer. You might also consider taking the quiz related to this content after you've completed both the lecture and lab.

WEDNESDAY

Watch the second video lecture of the week and take notes in your External Brain. Repeat the Monday tasks with the new lecture material.

THURSDAY

Repeat the Tuesday tasks with the new lab material.

FRIDAY

Friday is a great day to catch up with any content, and do a little studying.

SATURDAY

Saturday is the end of our week (with Sundays reserved for whatever you need to get ready for the next week, including taking care of yourself). Saturday is a great day to study, to clean up your EB, make sure you've submitted all lecture and lab assignments, and retake the quizzes for practice.

Biology 6 – Human Anatomy

Fall 2025 (BIOL-6-V9342)

[F25 Tentative Schedule](#)

Course policies

This section is full of course details (and some required "fine print"). Some of this content is included because it is required by College of the Redwoods (I've put that stuff toward the bottom). Other parts describe policies that might be a little different from other classes you've encountered. Take some time browsing what you need, and holler if you have questions.

Lab work policy

This is a lab course and one that many traditional educators believe cannot be effectively taught online. I disagree and have carefully designed a course that I know will facilitate deep and meaningful learning, including lab experiences. Your labs include identifying structures on images taken from human cadaver donors, histology work using digital slides, and four dissections of animal organs. Because your lab work is only worth 5% of your total grade, you can technically pass the class without doing the labs at all. Our lab work policy, however, will prevent this. There are two important things for you to know.

1. You must earn 70% of the lab points in the class to pass. If you are in danger of falling below this mark, you will hear from me.
2. You must complete all four dissections to pass the class.

Both of these things are manually checked by me. I do not like failing people who actually have passing grades in Canvas. However, I cannot justify letting you get lab credit for a class in which you've done no meaningful lab work...hence this policy.

Late work policy (aka, introducing "best by" dates)

You are probably used to hard due dates and policies around late work. In this class, our due dates are more complex. Instead of hard (inflexible) "due dates," we have "best by" dates. I encourage you to treat these "best by" dates as hard due dates as much as possible, because they are designed to keep you on track with the class and help you pace your learning in a way that also maximizes the support around you. However, if life happens (and if the last 5 years are any indication...life WILL happen), you can absolutely prioritize your time as needed, and catch back up when you can. I trust you and know that you want to learn the course content. We can work together for the win-win.

Best-by dates allow for flexibility, but all assignments (with the exception of quizzes) have hard due dates indicated on the [course schedule](#). These hard due dates were chosen because some assignments lose value after a certain point. Hard due dates are as follows:

- **Th 9/18**
 - EB 1
- **Sun 9/21**
 - Lectures 1-6
 - Labs 1-6
 - Exam 1
- **Th 10/16**
 - EB 2
- **Sun 10/19**
 - Lectures 7-12
 - Labs 7-12
 - Exam 2
- **Wed 11/12**
 - EB 3
- **Sat 11/15**
 - Lectures 13-18

- Labs 13-18
- Exam 3
- **Th 12/11**
 - EB 4
- **Sun 12/14**
 - Lectures 19-23
 - Labs 19-23
 - Exam 4

After these hard due dates, you cannot turn in late work for credit. This is especially important to keep track of for the lab work in the class, because you must earn at least 70% of the lab points in the class *and conduct all four required dissections* if you want to pass.

Confirming your presence in the online classroom

Canvas is our classroom. As soon as possible, please log in to our course in Canvas and begin completing the tasks in the “Start here” Module to ensure you keep your spot in the online classroom. Doing so will confirm your enrollment in the course and prevent you from being dropped as a “no show.”

It is really important that you show up for our online class during the first week to make sure you aren't dropped from the course. However, sometimes it can be tricky to get oriented to the requirements and patterns in a brand new online class, especially if you get started late. So take some deep breaths, and if you plan to stick out the class, just let me know what's up. I'm delighted to work with you as we (all!) find our grooves.

Drop policy

Every week, we'll have up to six different assignments. If it looks like you aren't keeping up with the best-by dates on these assignments, I will likely reach out to you through Canvas messages with a “friendly reminder.” Please watch for these messages and respond promptly if you receive one. If I don't hear back from you, you might get dropped from the class.

Academic Integrity and AI

There is zero tolerance for any form of academic dishonesty, including cheating, helping others to cheat, falsification of data, or plagiarism. However, I enthusiastically encourage you to work together in this class on many activities. If you are wondering about whether or not something would be considered cheating, please please please ask me! Let's decide together. I know you want to truly learn the content of this class, and “grades” tend to be the way we've always quantified someone's learning. But I want your grade to accurately reflect your learning, and if you don't do your own work, then this won't happen. So let's be really clear and open about this part of our online class.

Please know-- if you submit ChatGPT or other forms of AI content generation and claim it as your own, that is a form of academic dishonesty. This doesn't further your learning and wastes everyone's time. However, I understand that generative AI tools might provide study aids or perspective for you. As long as you aren't submitting it as your own original work, I am fine with you seeing how these tools can help you master the material.

(Finally, I have to include the following information in my syllabus, for legal reasons. But please know that I trust you and am confident in your success this semester.)

Academic dishonesty in any form will result in a formal report and details will be submitted to the appropriate authorities. Refer to the Student Code of Conduct and Disciplinary Procedures at <http://www.redwoods.edu/District/Board/New/Chapter5/Ap5500.pdf> for more information about CR policies.

Admissions deadlines

[Fall 2025 Enrollment Services Calendar](#)

- Classes begin: 8/23/25

- Last day to add a class: 8/29/25
- HOLIDAY: Labor Day 9/1/25
- Last day to drop without a W and receive a refund: 9/5/25
- Census date: 9/8/25 (or 20% into class duration)
- Last day to petition to graduate: 10/30/25
- Last day for student-initiated W (no refund): 10/31/25
- Last day for faculty-initiated W (no refund): 10/31/25
- HOLIDAY: Veteran's Day 11/11/25
- HOLIDAY: Fall Break 11/24/25-11/28/25
- Final examinations: 12/13/25 – 12/19/25
- Last day to petition to file P/NP option: 12/19/25
- Semester ends: 12/19/25
- Grades due: 12/26/25
- Transcript release: 1/2/26

Emergency procedures/Everbridge

College of the Redwoods has implemented an emergency alert system called Everbridge. In the event of an emergency on campus you will receive an alert through your personal email and/or phones. Registration is not necessary in order to receive emergency alerts. Check to make sure your contact information is up-to-date by logging into [WebAdvisor](#) and selecting 'Students' then 'Academic Profile' then 'Current Information Update.'

Please contact Public Safety at 707-476-4112 or security@redwoods.edu if you have any questions. For more information see the Redwoods Public Safety Page.

In an emergency that requires an evacuation of the building anywhere in the District:

- Be aware of all marked exits from your area and building
- Once outside, move to the nearest evacuation point outside your building
- Keep streets and walkways clear for emergency vehicles and personnel

Do not leave campus, unless it has been deemed safe by the campus authorities.

Biology 6 – Human Anatomy

Fall 2025 (BIOL-6-V9342)

[F25 Tentative Schedule](#)

Communication

Online classes can feel lonely and isolating. If you have a question or concern, please PLEASE get a hold of me. I am very available to help. It is very important that we create a meaningful online community in this class, and being in touch with each other is clutch. So if you have a question or concern, just holler.

It is also important that we communicate with each other in a way that most effectively supports sharing and learning (which means it has to be safe to try things out). Learning is a process, and we don't really make progress in our understanding unless we clearly identify what we DON'T understand. This can be a vulnerable experience, especially when the course content (biology!) is so important. Thank you for helping nurture a safe learning environment.

Here are some communication guidelines that might help:

- **Might your question benefit other people in the class?** Then post it to the “Questions for Riggs?” discussion forum in Canvas. You'll find this discussion at the bottom of the orientation module in the class. I do my best to keep tabs on this discussion and always try to respond within 24 hours (though it might take longer on the weekends).
- **Is your message private?** Send a Pronto (preferred), an email (to wendyk-riggs@redwoods.edu), or a message through Canvas (click on INBOX in the far left menu in Canvas).
- **Is your message urgent?** Pronto is a fantastic way to reach out to me. I will do my best to get back to you ASAP.
- **Let's be honest.** I know we are all working really hard right now, and honestly, most of us are operating within unusually challenging circumstances. Let's commit to being open and honest, to advocate for ourselves, and to treat each other (and ourselves) with respect and regard. I really look forward to working with you.

Pronto

Pronto is a crazy cool chat tool that is embedded in Canvas and seriously ROCKS. You can access Pronto through an app on your phone, through Canvas, or in the web browser. I use Pronto often, and it is a fantastic way to make contact with me and your fellow students. It is, hands down, the fastest and most efficient way to connect with me.

Pronto lets us text each other without sharing phone numbers, or requiring us to connect up on the same social media site. And the awesome thing is that you can have a private message with me, or you can easily form groups for chatting.

One of our orientation activities involves connecting with me in Pronto. I look forward to chatting with you soon!

Where to get extra help

CR has many services available to support you. This is not a comprehensive list, but it might be helpful.

Educational Accessibility & Support

College of the Redwoods is committed to providing reasonable accommodations for qualified students who could benefit from additional educational support and services. You may qualify if you have a physical,

mental, sensory, or intellectual condition which causes you to struggle academically, including but not limited to:

- Mental health conditions such as depression, anxiety, PTSD, or bipolar disorder
- Common ailments such as arthritis, asthma, diabetes, autoimmune disorders, and diseases
- Temporary impairments such as a broken bone, recovery from significant surgery, or a pregnancy-related disability
- Neurodevelopmental disorders such as a learning disability, intellectual disability, autism, acquired brain injury, or ADHD
- Vision, hearing, or mobility conditions

Available services include extended test time, quiet testing environments, academic assistance and tutoring through the [LIGHT Center](#), counseling and advising, alternate formats of course materials (e.g., audio books, braille, E-texts), assistive technology, learning disability assessments, approval for personal attendants, interpreters, priority registration, on-campus transportation, adaptive physical education and living skills courses, and more. If you believe you might benefit from disability- or health-related services and accommodations, please contact [Student Accessibility Support Services \(SASS\)](#). If you are unsure whether you qualify, please contact Student Accessibility Support Services (SASS) for a consultation: sass@redwoods.edu.

SASS office locations and phone numbers

Eureka campus

- Phone: 707-476-4280
- Location: Student Services building, first floor SS113

Del Norte campus

- Phone: 707-465-2353
- Location: main building, near the Library

Klamath-Trinity campus

- Phone: 707-476-4280

Student Support Services

Good information and clear communication about your needs will help you be successful. Please let your instructor know about any specific challenges or technology limitations that might affect your participation in class. College of the Redwoods wants every student to be successful.

The following online resources are available to support your success as a student:

[CR Online Learning Support](#)

Tech support, laptop loans, guides to using Canvas, installing Office 365 for free, and more.

[Library Articles & Databases](#)

Find the best library databases for your research.

[Online Tutoring Resources](#)

Participate in tutoring over Zoom.

Klamath-Trinity students can contact the CR Klamath-Trinity Office for specific information about student support services at 530-625-4821.

Community College Student Health and Wellness

National Suicide Prevention Lifeline

If you are in distress or are with someone at risk right now, call or text the National Suicide Prevention Lifeline.

Call the National Suicide Prevention Lifeline

1-800-273-TALK (8255)

Text the National Suicide Prevention Lifeline

741-741

Timely Care

When you're not feeling well physically or distressed mentally, Timely Care can offer the help you're looking for in just a few quick taps. Students can schedule an appointment anytime via phone, video, and chat. [Log in or set up an account with Timely Care.](#)

Mental Health Counseling

Students should text, email, or fax Shawna Bell directly for scheduling and/or services.

- Text: 707-496-2856
- Email: shawnabmft@gmail.com
- Fax and voicemail: 707-237-2318

Wellness Central

Resources, tools, and trainings regarding health, mental health, wellness, basic needs and more designed for California community college students, faculty and staff are available on the California Community Colleges [Wellness Central](#).

Counseling

[Counseling and Advising](#) can assist students in need of academic advising and professional counseling services. Call, email or stop by one of our offices to make an appointment!

Counseling and Advising office locations and contact info

Eureka campus

- Phone: 707-476-4150
- Location: Student Services Building, first floor
- Email: counseling@redwood.edu
- Hours: Monday through Friday, 9am to 4pm. Summer hours may vary

Del Norte campus

- Phone: 707-476-2300
- Location: Main Building, next to the library
- Hours: Summer hours may vary

Klamath-Trinity campus

- Phone: 530-625-4821
- Email: KT-staff@redwoods.edu
- Hours: Summer hours may vary

Basic Needs Center

[Basic Needs Center](#) provides for the health and safety of students by providing access to healthy food, financial resources, and referrals to safe and secure housing. [Submit a request for services and information.](#)

Basic Needs Center contact info

- Phone: 707-476-4153
- Email: the-grove@redwoods.edu

Learning Resource Center

The Learning Resource Center includes the following resources for students:

Library Services

[Introduction - Library Services for Students - LibGuides at College of the Redwoods](#) promotes information literacy and provides organized information resources.

Multicultural and Equity Center (MCE)

The [Multicultural and Equity Center](#) is a dynamic and inclusive place that supports all students in their academic and personal journeys at the college. We do this by creating community, home away from home, and a safe place for cultural expression, cross-cultural learning, access to college and dignity resources, and social justice work opportunities. The MEC is committed to retention and student success by offering activities related to leadership development, student connectedness and student equity. We are a student-centered program that fosters respect for all people.

Academic Support Center

The [Academic Support Center](#) offers tutoring and test proctoring for CR students.

Student Tech Help

Technical [Support](#) provides students with assistance around a variety of tech problems.

Extended Opportunity Programs and Services (EOPS)

[EOPS/CARE](#) (EOPS) provides services to eligible income disadvantaged students including: textbook awards, grants, career academic and personal counseling, transportation assistance, tutoring, laptop, calculator and textbook loans, priority registration, graduation cap and gown, workshops, and more!

TRiO Student Success Program

The TRiO Student Support Services Program provides eligible students with a variety of services including academic advising, career assessments, assistance with transfer, and peer mentoring. Students can apply for the program with the [Eureka TRiO office](#) or the [Del Norte TRiO office](#).

Veterans Resource Center

The [Veterans Resource Center](#) supports and facilitates academic success for Active Duty Military, Veterans and Dependents attending CR through relational advising, mentorship, transitional assistance, and coordination of military and Veteran-specific resources.

CalWORKS

California Work Opportunity & Responsibility to Kids ([CalWorks](#)) provides supportive services to student parents with children under the age of 18, who are receiving cash assistance (TANF benefits), to become self-sufficient. Services include: transportation assistance, basic student supplies, tutoring, priority registration, laptop and calculator loans, career, academic, and personal counseling, and more!

Biology 6 – Human Anatomy

Fall 2025 (BIOL-6-V9342)

[F25 Tentative Schedule](#)

Riggs's philosophy of learning

Active Learning in an Online Class

Learning happens when your brain changes. If your brain does not actually change the way neurons communicate with each other, then learning won't happen. And the best way to **change your brain** is to **DO SOMETHING**. This is the fundamental assumption that informs the methods, or pedagogy, I use in all my classes.

Research about how people learn (or how they change their brains) overwhelmingly indicates that the most successful teaching methods inspire students to be **active participants** in the learning process. Collaboration and problem solving are just a few ways to engage fully in your own learning. To facilitate active learning, the job of your instructors moves away from passive delivery of content (usually via lecture) and toward the creation of engaging activities that motivate YOU to take charge of, and fully participate in, your own educational processes. In this class, you'll have a buffet of learning opportunities. Take advantage of this to find what works best for you.

Learning is a PROCESS

All biology classes are challenging, but human anatomy is especially challenging. There is a ton of new content and this includes not only new vocabulary, but also new concepts. I often think of anatomy as a language class. My goal is that you *truly learn* the material, and this requires you to not only memorize new terms, but also *think* about what those terms MEAN. But here is the awesome part. **LEARNING IS A PROCESS**. My courses are set up to offer plenty of chances to capitalize on learning opportunities and IMPROVE YOUR UNDERSTANDING OVER TIME (and also your grade). Please embrace a **GROWTH MINDSET** in this class. Take feedback and grades as opportunities to improve your strategies and maximize your understanding. Set out to truly UNDERSTAND the material, and your grade will reflect that understanding. And I will do everything I can to help you along the way!

Final Thoughts

The material presented in this course is relevant and stimulating. Throughout this semester, you will gain knowledge and skills that will help you critically evaluate many pressing issues in our modern society, enabling you to be an educated participant in important social conversations and your own healthcare. I am therefore quite motivated to see you succeed in this class. To help you with this challenge, I have compiled a list of suggestions that will help you learn the content. Please keep in mind that you probably won't have time to carry out every single suggestion. So choose from the list of suggestions below and get organized. Think about what you want to learn in this class and make a clear plan for the semester that will enable you to meet your goal. Stick to your plan, maximize your efficiency, and make the most of your time in this course.

Anatomy is a difficult course, but the material is fascinating and easily applicable to your life and the careers you are interested in. The effort you make toward true understanding will be totally worth it.

Here are a couple resources that might be helpful in all your classes:

- 20 minute video entitled: "[Study Smarter, Not Harder: Ten Tips for Studying Physiology](#)"
- 4 week long class (FREE) through Coursera: "[Learning How to Learn](#)"

Advice from Riggs

1. Study anatomy every single day. Some suggestions...
 - Watch the video lectures and TAKE GOOD NOTES. Then rewrite your notes and answer the study guide questions (found with each lecture discussion) within 24 hours of class.
 - Explain anatomy topics to your dog, cat, Victor, friends, kids, and neighbors.
 - Make note cards, and carry them around with you, everywhere you go. (You can make them part of your External Brain!)
 - Draw lots of pictures and hang them on the fridge.
2. Be conscious during video lectures. Make lists of your questions and bring them to the discussion forum. Holler when you don't understand something.
3. Be diligent and disciplined in lab activities. Your goal is to identify all required structures by providing hands-on experiences with the complex materials presented in lecture. Take advantage of your lab work to improve your learning.
4. Keep detailed notes in your External Brain. This will help all aspects of your understanding.
5. Stay ahead of the game. Don't skip lectures or labs, and utilize all the study aids offered through Canvas.
6. Form study groups with your classmates, online and in person. Hang out, eat fun food, and talk anatomy 1-2x/week.
7. Practice writing the answers to short essay questions. Have your classmates read your answers and grade them. Practice being CLEAR, CONCISE, PRECISE and CORRECT.
8. Make up practice exams based on the study guide questions. Share them with your classmates. Grade each other!
9. If the going gets tough, READ your textbook! IT WILL HELP (especially if you use it to answer tough questions).
10. Embrace the GROWTH MINDSET. You deserve it!
11. And if the going is still tough, buckle down and repeat after me: "I can do anything for 16 weeks." You CAN do this class. All you need to do is find the time to make it happen.

Advice from past students

1. Consistently designate time for studying.
2. Don't get behind on the dissections! Read through the discussion posts!
3. Turn the work in on time and take good, organized notes to prepare yourself for the exams
4. Watch the lectures, take good notes, do the connect and histology assignments, and always reference the textbook. The textbook has really good diagrams and if you have any questions after watching the lectures and doing the lab assignments, the textbook has more in depth information which may be needed when looking to better understand your "required structures"
5. Make sure to take notes in the connect labs and also histology labs!!! I found that even though the lectures wouldn't have all of the information needed for quizzes and exams, the connect labs had so much information to add on as well.
6. Stay on top of the labs because they can be easy to fall a little behind on.
7. Print the pictures from the online book so you have the right placing of structures.
8. stay on top of the best by dates. it is easy to fall behind and can be discouraging when you do.
9. Take tons of notes, print out unlabeled pictures and label them yourself for your external brain, and spend a lot of time on the dissections.
10. Trust the lecture notes to help guide you in what you need to focus on for your studies.
11. Be organized and try to complete things on time so you do not get behind.
12. Ask all the questions! I think working with certain professors most students shy away from contacting them but Riggs is super approachable and helpful!
13. Don't let the lenient due dates screw you over! I didn't do it this time but I feel like it's one of those things that is so so so great when life happens and you're delayed by a day or two but it's also definitely a slippery slope and staying caught up can become difficult that way. ESPECIALLY if you're taking more than one class at time.

14. Make sure to stay on top of the content as it is published/due, don't let it get more than one week past due. It's a shitty game of catch-up at that point and gets super stressful.
15. Have at least a 4 hour daytime chunk of time set aside for learning , and then do half an hour to an hour most days of the week.
16. Stay on top of the best by dates, don't let yourself fall behind because it's difficult to catch up. Also take your time with the labs because they will be invaluable to you when you can use them on exams.
17. MAKE SURE TO STICK WITH THE BEST BY DATES! Yes it's nice to know everything is available to the end but always remember to stay ahead of the curve not behind. Also don't rush through each assignment, take the quizzes multiple times to test every question to help with studying, and save each connect so that you can go back later and refresh your memory on some of the older ones.
18. Really study your histology and ask lots of questions.
19. Get your material ahead of time, like your book and the visible body. Get started as soon as possible so you don't get behind. Also print your histology and have a tab for it. Even though you know the histo for that lecture, more histology will be added and it can get confusing.
20. Don't just click through the connect labs, actually look at the picture and read the more information column; there are so many helpful notes in there.
21. DO THE HARD STUFF EARLY!!!!!! Â Draw more and be silly with it!
22. Don't ever ever fall behind.
23. Don't dismiss the lecture discussions just because they aren't worth much for your grade. They can be a very helpful learning tool if you actually use them to think about what you learned.
